## Did Health Care had more positive income in year 2 compared to Energy? (Total Revenue Analysis)

- The mean for companies under health care was less than the mean of companies under energy in year 2, which means energy companies had higher total revenue in year 2
- The median of both categories is less than the total revenue's mean which means a positive skewed distribution
- Companies under Energy had a huge difference in STDV in comparison with health care, meaning in year 2 they had a higher variability in total revenue
- By inspecting the range we notice that companies under Health Care has signifyingly higher Range compared to the companies under Energy; therefore, they have more variability in the total revenues they receive and their values are more spread.
